

Q.Python program to convert the month name to a number of days.

Ans:

given list of month name

```
month = ["January", "April",  
"August", "June", "Dovember"]
```

iterate through each mont in the list

```
for i in month:
```

```
    if i == "February":
```

```
        print("The month of February has 28/29 days")
```

```
    elif i in ("April", "June", "September", "November"):
```

```
        print("The month of",i,"has 30 days.")
```

```
    elif i in ("January", "March", "May", "July", "August",  
"October", "December"):
```

```
        print("The month of",i,"has 31 days.")
```

```
    else:
```

```
        print(i,"is not a valid month name.")
```
